Anurag josyula

San Jose, California | +1 (669) 900-3100 | josyulaanurag@gmail.com | linkedin.com/in/anurag1001

Education

San Jose State University, San Jose, CA **Jan 2025 – Dec 2026**
Master of Science in Applied Data Intelligence

Experience

Software Engineer **June 2026 – Aug 2026**
Cloudely *Sunnyvale, San Jose*

- Architected and deployed a full-stack, large-scale lead-scoring platform using **Go**, **Python**, **JavaScript**, **React**, **REST APIs**, and **MongoDB**, prioritizing **5,000+ leads** and improving sales triage by **40%**.
- Solved ambiguous CRM data challenges by combining **Tavily**, **RAG**, **LangGraph**, **MCP**, browser automation, structured LLM outputs, and deterministic scoring, reducing manual lead research by **50%**.
- Built testing and evaluation pipelines for API validation, measuring reasoning accuracy, hallucination rate, tool utilization, and latency while maintaining **99% availability** through fallback handling and tenant isolation.
- Led feature delivery across a large multi-service codebase, resolving dependencies, unblocking technical obstacles, and communicating implementation tradeoffs with engineers and stakeholders through collaborative problem solving.

AI Engineer Intern **May 2025 – Nov 2025**
IIIT Hyderabad *Hyderabad, India*

- Engineered scalable data-processing workflows using **Scala**, applying structured transformations and model-serving logic to process **50,000+** environmental records and classify **500+** stepwells across three vulnerability tiers.
- Built an agentic **Streamlit** application integrating **Google Earth Engine**, **Folium**, and **Tavily**, reducing manual geographic data processing by **40%** while supporting more than **100** conservation mapping requests.
- Developed **Random Forest**, **K-Means**, and **Isolation Forest** models for environmental monitoring, achieving an **R^2 score of 0.85** and isolating the top **5%** of critical outliers for review.

Software Engineer **March 2023 – March 2024**
Nat IT Services PVT Ltd *Hyderabad, India*

- Analyzed large-scale datasets using **Python** and **SQL**, applying data structures, algorithms, and statistical analysis to identify behavioral trends and improve operational efficiency by **20%**.
- Built automated reporting, ETL, and data-processing workflows using **Python**, **SQL**, and Power BI, reducing manual effort by **40%** while improving repeatability and decision-making.
- Developed and validated time-series forecasting models with **Prophet**, improving prediction accuracy by **18%** through iterative testing, statistical analysis, and model evaluation for operational planning.

Academic Projects

AI Enhanced Property Rental Platform | ***JavaScript, React, Python, FastAPI, PostgreSQL*** **June 2025**

- Built a full-stack property rental application with **JavaScript**, **React**, **Python**, **FastAPI**, REST APIs, PostgreSQL, embeddings, and RAG, improving query understanding by **35%** and reducing irrelevant responses by **25%**.
- Containerized and validated frontend and backend services with **Docker** and **AWS**, applying modular request processing and retrieval pipelines to improve reliability, maintainability, and scalable deployment.

TravelGrid – Event-Driven Booking System | ***Python, FastAPI, Kafka, Redis*** **April 2025**

- Developed modular booking services with **Python** and **FastAPI**, implementing reusable REST APIs and recommendation logic that improved personalization accuracy by **28%** across simulated booking workflows.
- Engineered **Kafka** and **Redis** event-driven processing for scalable real-time booking workflows, reducing latency by **25%** under simulated production loads while supporting asynchronous service communication reliably.

Travel Assist AI (Detour) | ***Python, TypeScript, Next.js, Convex, Fetch.ai*** **3rd Prize, Fetch.ai Track – Cal Hacks 13.0**

- Built a 12-agent **Fetch.ai** system with **Python**, **TypeScript**, **Next.js**, and **Convex** for itineraries, voting, payments, food planning, and shared real-time state for group road-trip workflows.
- Implemented structured-output routing, **Stripe** approval flows, idempotency, cryptographic signing, and fallback handling, achieving a **0.7% error rate** across **685 actions** with **6-second median replies** end-to-end.

Technical Skills

Languages: Python, Java, C++, Go (Golang), JavaScript, TypeScript, Scala, SQL, R
Frameworks&Analytics: React, FastAPI, LangChain, LangGraph, Transformers, Streamlit, Scikit-learn, Statistics, Time-Series Forecasting, Prophet, Power BI
Databases&Cloud: MongoDB, PostgreSQL, Redis, SQL/NoSQL, BigQuery, AWS, Google Cloud Platform, Vertex AI, Docker, Kubernetes, Unix/Linux, Git, CI/CD, Airflow, Pub/Sub
AI / ML: Gemini, GPT APIs, LLMs, Machine Learning, NLP, Information Retrieval, AI Agents, Multi-Agent Systems, MCP, Hugging Face Transformers, Embeddings, RAG, Prompt Engineering, LLM Evaluation, AI Output Validation
Software Systems: Data Structures, Algorithms, OOP, Software Development, REST APIs, Frontend/Backend Development, Microservices, Infrastructure, Distributed Systems, Distributed Computing, Parallel Systems, Event-Driven Architecture, Large-Scale System Design, Large Software Systems, Large-Scale Applications, Database Systems, Data Storage, Networking, Security, Cloud Platforms, System Design, Production Reliability, Monitoring/Observability, Performance Engineering, Code Review Practices, Version Control, Testing, Deployment, Software Maintenance, Debugging, API Validation, SDLC
Other Skills: Agile Development, Technical Ownership, Leadership, Problem Solving, Critical Thinking, Customer Focus, Prioritization, Deadlines, Deliverables, Adaptability, Learning Agility, Written Communication, Stakeholder Communication, Cross-Functional Collaboration
