

ANURAG JOSYULA

📍 San Jose, California 📞 +1 (669) 900-3100 ✉ josyulaanurag@gmail.com 🔗 linkedin.com/anurag1001

Education

San Jose State University, San Jose, CA

Jan 2025 – Dec 2026

Master of Science in Data Analytics

Jawaharlal Nehru Technological University Hyderabad

Dec 2020 – May 2024

Bachelor of Technology in Computer Science

Technical Skills

Languages: Python, Java, C++, Go, Rust, TypeScript, SQL

Frameworks&Libraries: FastAPI, LangChain, Transformers

Databases: PostgreSQL, Redis, SQL, NoSQL

Cloud/DevOps: Unix/Linux, AWS (EC2, S3), Docker, Kubernetes, Git, CI/CD

Developer Tools: AI Productivity Tools, AI Development Tools, VS Code, PyCharm, Postman, Jira

AI / NLP: Machine Learning, Natural Language Processing, Information Retrieval, LangGraph, GPT APIs, Hugging Face Transformers, Embeddings, Retrieval-Augmented Generation, Prompt Engineering, Multi-Agent Systems, AI Development Tools

Concepts: Data Structures, Algorithms, Software Development, OOP, Distributed Systems, Parallel Systems, Large-Scale System Design, Database Systems, Data Storage, Networking, Security, REST APIs, Web Application Development, Mobile Application Development, Microservices, Cloud-Native Architecture, SDLC, System Design Basics, Testing, Deployment, Software Maintenance, Debugging, Troubleshooting, Design Patterns, Version Control, Operational Excellence, UI Design, Accessible Technologies, Problem Solving, Collaboration,

Other Skills: Agile Development, Technical Documentation, Code Reviews, Scalable Systems, Fault-Tolerant Systems, Cost Optimization, Customer Obsession, Ownership, Leadership, Project Prioritization, Deadline Management, Deliverables, Analytical Thinking, Communication, Adaptability, Continuous Learning, Ability to Learn New Programming Languages, English Proficiency

Experience

Software Developer Intern

June 2026 – Present

Cloudely

Sunnyvale, CA

- Designed, developed, and deployed scalable **Python** software using **REST APIs**, **LangGraph**, browser automation, and LLM tool calling to streamline complex enterprise business and development workflows.
- Developed AI productivity solutions using **Python** and **REST APIs**, enabling dynamic planning, external tool orchestration, and reliable integration with enterprise applications across multi-step software workflows.
- Built automated testing and evaluation pipelines using **Git**, measuring reasoning accuracy, hallucination rate, tool utilization, and latency to debug issues and improve software reliability and model iteration.
- Improved and maintained AI workflows through information retrieval optimization, context compression, persistent memory, and prompt engineering while managing project priorities and deliverables through completion despite technical roadblocks.

Research Apprentice – AI Web Systems

May 2025 – Nov 2025

IIIT Hyderabad

Hyderabad, India

- Designed and developed **Python** AI workflows using **LangChain** and **Transformers** for natural language processing, document reasoning, summarization, and entity linking, improving processing efficiency by **30%**.
- Developed AI productivity workflows for content generation and multi-step reasoning, applying information retrieval and machine learning techniques to explore practical use cases for developer-focused software solutions.
- Tested and validated AI workflows while creating system demonstrations, technical documentation, and presentations that communicated software functionality to developers and improved usability across cross-functional technical audiences.
- Collaborated with researchers and developers to translate requirements into software features, manage research deliverables, and follow development tasks through implementation, testing, validation, and presentation despite evolving requirements.

Software Developer

March 2023 – May 2023

Nat IT Services PVT Ltd

Hyderabad, India

- Developed scalable data-processing software using **Python** and **SQL**, analyzing large-scale datasets and identifying behavioral trends that improved operational efficiency by **20%** across recurring analytics workflows.
- Developed automated reporting workflows using **Python** and Power BI, reducing manual effort by **40%** while improving data accessibility and supporting faster decision-making across business operations.
- Applied algorithms, testing, debugging, and machine learning techniques to time-series forecasting using **Python** and Prophet, improving prediction accuracy by **18%** while strengthening analytical software quality.
- Collaborated with cross-functional stakeholders to translate analytical requirements into software solutions, taking ownership of deliverables while adapting project priorities and following tasks through completion as requirements evolved.

Academic Projects

AI Enhanced Property Rental Platform | **Python**, **FastAPI**, **React**, **PostgreSQL**, **LangChain**

June 2025

- Developed a full-stack web application using **Python**, **FastAPI**, and **React**, applying natural language processing to property search and recommendations while improving query understanding accuracy by **35%**.
- Designed distributed backend services using **REST APIs**, **PostgreSQL**, and retrieval-augmented generation, combining information retrieval and data storage to reduce irrelevant recommendation responses by **25%**.
- Containerized, tested, and deployed application services using **Docker** and **AWS**, applying CI/CD practices to improve scalability, software maintenance, and reliability across the web application development lifecycle.
